

Dawer

Digitalizing the Circular Economy

Project Summary

Dawer is an innovative marketplace platform designed to transform waste management in Jordan. By connecting suppliers, drivers, and recycling companies, it creates a sustainable ecosystem that incentivizes recycling and streamlines logistics through cutting-edge technology.

1. Market Opportunity

- Fragmentation: Traditional waste collection lacks source-sorting and financial incentives.
- Source Quality: Recycling companies struggle to source high-quality, pre-sorted materials.
- Gig Economy: Lack of structured opportunities for local drivers in the green sector.

2. The Three-Sided Marketplace

Suppliers: Individuals and businesses who list recyclables and earn rewards.

Drivers: Contractors who accept pickup jobs and earn income through logistics.

Recycling Centers: Industrial partners who buy bulk materials and post collection jobs.

3. Artificial Intelligence Core

Dawer uses AI to bridge the physical-digital gap:

- Image Labeling (ML Kit): Instant, on-device detection of materials like oil and wood.
- Dawa Chatbot: Smart assistant providing recycling guidance and platform support.

4. Technology Stack

Category	Technology
Frontend	Flutter (Dart)
Backend	Supabase
State Management	Provider

Dawer

Digitalizing the Circular Economy

AI Services	Google Gemini & ML Kit
